

Figure 1. A schematic diagram illustrating the experimental design. The figure shows two parallel horizontal timelines representing the duration of the study. The top timeline is labeled "Participant" and the bottom timeline is labeled "Researcher". Both timelines start at a point labeled "Baseline". On the participant timeline, there are three vertical bars indicating periods of "Stressor exposure". Between the first and second stressor exposures, and between the second and third, there are labels for "Recovery period". On the researcher timeline, there are corresponding labels for "Data collection" which occur during the recovery periods. Arrows indicate the flow of information from the participant's experience to the researcher's data collection.
